

Born to be wild - Wild Child is an award-winning 2D and CG animation studio based in Scotland.

Wild Child Animation, an award-winning 2D and CG animation studio, was founded in 2020 in Stirling, Scotland by a group of seasoned producers and creatives. Known for their collaborations with Sky Kids, Warner Bros, Cartoon Network, BBC, and Hanna Barbera, they approach each project with creativity and passion. Their dedication has earned them numerous awards and nominations, including Baftas, Royal Television Society Awards, Rocky Awards, and Kid Screen Awards.

Since 2021, we've been proud to support Wild Child Animation by providing top-end workstations, network infrastructure, NAS devices, switches, and more. Our reliable hardware solutions ensure their creative processes are seamless and efficient, helping them achieve their ambitious goals.

Requirement

Wild Child needed new custom design workstations so their artists could work on multiple projects at once. They wanted the systems placed in the server room to save space, enhance cooling, and keep the office quiet during intense rendering periods. We tailored our configuration to meet these needs, fitting into a unique 2U rackmount case and CPU cooler, ensuring the system runs fast and reliably with added PSU redundancy.

Solution

Forge R2 – 2U Rackmount Workstation

- CPU: AMD Ryzen Threadripper (7960X)
- RAM: 64GB ECC DDR5 (4800Mhz)
- GPU: NVIDIA Low profile ADA GPU (8GB)
- Warranty: 5 Year Next Business Day

“Wild Child Animation has been working with Very PC since the early days of the Studio and not only have we always enjoyed great service from their team, but they always go the extra mile.”

Ron Henry
Director of Operations
