

Computers made for Education

Name: veryPC

Subject: 2024 Product
Brochure

Who are we?

Established in 2004, VeryPC initially provided computer hardware and managed IT services to charities and local businesses. Recognising a gap in the UK market, VeryPC set out to manufacture high-quality, sustainable computer hardware tailored for the education sector.

Although VeryPC started as a family business, we have grown considerably over the years while maintaining our family ethos. We do this by focusing on delivering world-class value in various aspects, including community engagement, cultural integration, customer satisfaction, and commercial excellence, in all our business endeavors.

"Our mission is to manufacture computers and provide solutions that solve problems, make life simpler and save our customer's time"

We manufacture and supply IT products and services to schools across the UK. We are dedicated to simplifying our customers' work lives, saving them time, and delivering a world-class experience that supports them in achieving the best outcomes for their organisations.

Building honest and long-lasting relationships is at the core of our business philosophy. We position ourselves as trusted advisors and extensions to our customers' operations.

Every aspect of VeryPC's products is designed to solve customer problems and provide them with time-saving solutions through innovative product design, configuration options, and services.

VeryPC for Education

We have witnessed firsthand the transformative impact technology can have on the learning environment. Our mission is to assist our customers in enhancing educational outcomes by sharing our extensive knowledge and experience in educational technology. Through our expert recommendations, state-of-the-art hardware, and comprehensive services, we can improve the efficiency of your school, benefiting both students and staff.

We go above and beyond the expectations typically associated with a supplier to ensure you receive what you need. This commitment is reflected in the substantial discounts offered to our education customers. While we lower our prices, we do not compromise on quality, ensuring you receive the maximum value from your budget.

VeryPC educational discounts enable schools to maximise the impact of their IT budget. You can opt for higher-spec units or replace a greater quantity with each purchase. Whether you choose to future-proof or boost your refresh cycle, your staff will be more productive, and your students will learn more smoothly with better quality technology.

This generation's learners are our future educators, builders, healers, makers, protectors, traders, administrators, and leaders. They are the ones who will make the difference between progress and decline. Whatever we do to improve their education is worth the investment.

Better outcomes ultimately lead to a better tomorrow for us all. Everyone benefits when great educators, teaching practices, and technology come together. With VeryPC, you're in safe hands and never have to worry.

What our customers have to say

"I could not have hoped for a better outcome for the project. VeryPC made everything easy and everything was delivered on time, within scope and the cost savings by moving to 3CX have been remarkable."

"We were looking for a computer that was specifically designed for education. We were fed up with buying computer cases that were flimsy and easily damaged.

I'd recommend VeryPC without hesitation. We've found the Flex Slim to be the perfect solution for our school and having used it now for 8 years it's by far the most reliable computer we've ever used."

"VeryPC provides top-notch IT hardware solutions, consistently delivering high-performance products that meet all of our school needs. Their hardware is reliable, durable, and cutting-edge, ensuring smooth operations for our systems. Their customer support is outstanding and they are always ready to assist with any issues or questions that we have. We highly recommend them for any school or business seeking a quality and dependable company!"

Broadleaf Mini

The first product in our Broadleaf Range and our first step towards a greener product lifecycle. Broadleaf Mini reduces the environmental impact of desktop computing, giving you the latest innovations and design with a reduced carbon footprint across the manufacturing process and whole product lifecycle.

Broadleaf Mini has been designed in partnership with Intel and our manufacturing partners JWIPC in a joint effort to reduce the environmental impact through design, manufacturing, and use.

The Broadleaf Mini uses a simple modular design, making it easy to assemble, service, replace parts, disassemble and separate.

Specifications:

- Processor:** Core i5
- Memory:** 8GB - 32GB DDR4
- Storage:** 250GB - 2TB SSD
- Network:** 1Gbps Wired & WIFI 6
- Graphics:** Intel UHD Graphics
- Operating System:** Windows 11
- Optional:** Bluetooth 5, Wifi 6

Flex Micro

The Flex Micro is a 1-litre powerhouse designed for education that can be easily attached to any VESA-compatible mount or display.

Built with durability and security in mind. Flex Micro is tamper-resistant and comes with a lockable cable cover to keep your system looking neat and avoid any unwanted tampering.

The cable shroud is easily secured with a single security screw.

Add custom branding!

Specifications:

- Processor:** Pentium or Core i3/i5
- Memory:** 8GB - 32GB DDR4
- Storage:** 250GB - 2TB SSD
- Network:** 1Gbps Wired & WIFI 6
- Graphics:** Intel UHD Graphics
- Operating System:** Windows 11
- Optional:** Bluetooth 5, Wifi 6

Pair a Flex Micro with an optional height-adjustable stand for a powerful, ergonomic, secure micro PC, perfect for any classroom.

Flex AIO

Introducing the Flex All-In-One, available in 24 and 27-inch screen sizes. With a built-in webcam featuring a privacy cover, the Flex All-In-One prioritises your students' security and privacy during lessons. Say goodbye to cable clutter with the internal PSU, providing a tidy and organised workspace.

For added versatility, choose the optional low-profile GPU to support entry-level gaming and 3D design projects, expanding its potential for educational and creative purposes.

To enhance security, we have an optional lockable cable cover to safeguard your device's I/O ports.

Specifications:

ARENA Range

Say hello to our new range of esports and gaming computers. Arena will take your gaming experience to the next level! Customisable to suit any gaming suite on both Intel and AMD.

Our high quality, premium cases are packed with the latest CPUs and the best graphics cards from leading brands to ensure that you're geared up for the in-game performance you need.

Considered the world's fastest-growing sport, esports is an exciting team activity that links to computing education, STEAM (Arts) subjects, and the development of digital skills.

We're supporting educational institutions with hardware specifically designed for esports. In no time at all, you'll be setting up your school's first competitive team and developing new career paths for your students.

View our ARENA range.

Visit: very-pc.co.uk/arena

Branded Devices

It might surprise you, but it's not just our own range of hardware that we supply to education. We work with a wide range of vendors to supply their laptops, mobile devices and desktop PCs to you.

Our ability to provide you with devices from brands such as Acer, ASUS, Dell, HP and Lenovo has seen our buying power increase, which in turn gives our sales team access to fantastic pricing.

It goes without saying, but you will still experience the same care and attention from us, no matter the brand of device you're buying.

Upgrade your device purchase with a selection of VeryPC customisations. You can, of course, opt to receive your products directly, untouched in their sealed boxes, but various special VeryPC services are also available to enhance your experience. These include custom branding, software image deployment, asset tagging and inventory management.

An added benefit of your devices being customised at our factory is that we'll spot flaws and can have any faulty products replaced straight away.

"Having previously furnished us with a batch of Lenovo laptops, we again went with a Lenovo branded device. VeryPC were able to supply these more competitively than anyone else I approached, including some big name resellers, but were still able to offer us all of their usual extras, such as custom branding."

Andy Pacey, IT Manager, Boston High School

Chromebooks

Chromebooks are taking the education market by storm and we've seen a huge increase in demand over recent years as schools discover the power of Google. This may come as a surprise to some of you, and we'd forgive you for thinking that we only sell our own VeryPC built devices, but if Chromebooks are your thing, then you're in the right place.

Whether it's taking the leap to become a "Google School" or you're just delving into the world of Chromebooks, then we're on hand to help. And as with most things here at VeryPC, we can add our own bit of magic on top, too. And as a Google for Education partner, you're in safe hands with us.

With more schools turning to ChromeOS, we've found that the simplicity of the operating system and overall ease of use is perfect for the education sector. There's no waiting for devices to boot up either as Chromebooks are ready to use within 8 seconds of being turned on.

From a technical aspect, ChromeOS is a light operating system where most of the "heavy lifting" is done through central computers in the cloud.

We've really cemented ourselves as a key Chromebook provider, and alongside our access to stock and competitive pricing, it's worth speaking to us and discovering all things Chrome.

Signage Players

Provide a new way of displaying high-definition media and digital content with our signage and media player range. Despite their small design, it offers all the performance you need to instantly turn your display into a giant all-in-one digital signage solution. Choose from a wide range of configurations so you can build the media player you need.

Our hardware platforms include OPS and media players, TV panels with WEBOS and our Mini PC range, which works with Windows and Android operating systems. In no time, you'll be quickly displaying digital content.

OPS System

Open Pluggable Specification (OPS) is the industry standard for connecting computer devices to flat panel/interactive displays via a universal internal slot.

With no cables, the VeryPC OPS System plugs into a single slot in the back of any OPS-compatible display (both touch and non-touch), instantly converting your big screen into a giant All-In-One Windows® PC. Plus, with 4K compatibility, your content will never look better.

Windows + Android players

We have a range of Windows & Android that all have the performance you need to instantly turn your display into a giant All-In-One digital signage solution. Choose from a wide range of configurations so you can build the media player you need.

View our range of signage players.

Visit: very-pc.co.uk/signageplayers

Audio Visual

Flat-panel displays are now the standard screen at the front of most classrooms, outperforming older interactive display technologies with a far superior user experience. Teachers and students can benefit from the latest technology, and high-spec hardware features unavailable with projectors and boards.

An interactive flat-panel display gives you access to big, bright displays with rich, vibrant colours in 4K Ultra HD. Touch technology is built into the unit with up to 40 simultaneous touchpoints.

"VeryPC supplied and fitted an audio-visual solution for the school. The quality of installation, service and support provided was exceptional."

Artur Pawlowski, ICT Technician, King Edward Primary School

We offer a full on-site installation service with a team of trained professionals, so you don't have to worry about doing any of the heavy lifting, mounting or cabling. We'll do the hard work and make sure everything is working perfectly. All you'll need to do is sit back and enjoy your new piece of kit.

View our range of interactive flat panels.

Our Factory Services

Over the years, we've become known for the phrase "nothing is standard", which doesn't just apply to the inside of our machines. We want you to have the best experience possible, so we go above and beyond to ensure that's precisely what happens. The way we see it, it's our job to make your job much easier.

From the second you get in touch with us, no matter the product or service required, we'll be with you every step of the way. That's why we offer a whole host of additional services that will enhance the look and feel of your new IT equipment.

Branding

We've become famous for adding a splash of colour to your new PCs with our custom branding options, which have become popular with staff and students. From the initial design, printing, and laminating to application on your new PCs, it's all done in-house at VeryPC with our design specialists.

With your school's branding on, it makes your PCs more yours. We've found that students treat their devices more respectfully and are proud to use them. You needn't worry about pesky students peeling them off either, as the material gradient is strong and resistant to rips and tears. If a super-strong student comes along, don't worry - we'll ensure we send out some replacements for you. Not only do we take care of the inside of your PC, but we also look after the outside.

"Getting the branding was a real added bonus and has been so easy to sort out. I simply emailed across our branding guidelines, sat back and waited and within a few hours a mock-up was sent over that blew me away. I sent this to our Marketing Director who approved the idea straight away and said that the VeryPC team had interpreted our needs perfectly."

Tony Cartwright, Systems Manager, Evolve Trust

Asset tagging

We can asset tag your hardware using a series of sequential numbers you supply. We can use the tags you provide to us or get the tags made for you - the choice is yours.

This doesn't just apply to VeryPC hardware, either. Even if you buy devices from leading brands through us, we'll also apply asset tags to those.

Deliver to desk

We want you to have a smooth and effortless journey with us. So from telling us your requirements, we don't stop until pupils are sat using their shiny new toys. If you need an extra pair of hands on the day when it comes to setting up your new PCs, then, honestly, don't be afraid to ask. You're the boss.

We'll get a team member on-site to help with unboxing, lugging things around, or even a complete desk installation, which includes connecting everything together, cable management, and giving your machines a quick boot-up to ensure everything is in order. We'll even take the packaging back with us.

Buy with confidence

We're proud of our work here at VeryPC. Much care and attention go into every product that leaves our factory, from meticulous construction to being boxed and ready to ship. Annoyingly though, electronic components are not infallible. When a rare fault we're responsible for happens, your inclusive VeryPC warranty ensures that your computer is either fixed or replaced at no extra cost. Our warranties range from a standard 1-year collect and return through to 5-year warranty options, and our team is on hand to get the best guarantee that works for your school. But if something's gone wrong, we'll do the hard work. That's a promise.

Shape the Future

Get affordable devices with Microsoft's Shape the Future scheme

We're constantly surprised at how many schools aren't aware of the Shape the Future scheme, which allows schools to purchase devices with discounted Windows licences from Microsoft partners - that's us!

Any UK school with a valid UK school email address is eligible and these devices can be used by administrators, teachers and of course students. A key aspect of our Named Partner relationship with Microsoft is offering access to affordable devices to any qualifying primary or secondary school and that's something we're very proud of. If your school isn't taking advantage of the scheme, be sure to get in touch with us.

How does the process work?

It's a relatively simple process to get started with the Shape the Future scheme and should you encounter any issues, our team is on hand to run through the process with you.

All you need to do is verify your school email address and register for the programme by using the electronic form on the Microsoft website. By registering your school's eligibility, you'll then qualify to purchase discounted Windows licences from VeryPC.

We're even able to send you an email template to send directly to Microsoft, should you encounter any issues. We won't leave you stranded!

Read more and get in touch to see how 'Shape the Future' could save you money.
