

Aurora Managed Services partner with VeryPC to provide interactivity into classrooms

Aurora Managed Services Ltd are a highly specialised office supplies, print, IT & business telecoms provider with over 20 years of experience. Aurora offers a consolidated product and service portfolio, which focuses on helping organisations to improve efficiency, increase productivity and reduce costs. They put customers at the heart of everything they do. Their work is focused on fully understanding customers' needs ensuring they help them at the right time in the right way.

Problem

Aurora's client, Myerscough College, aimed to enhance classroom interactivity to keep students genuinely engaged. To achieve this, they decided to invest in Samsung Flip3 interactive whiteboards, but they required robust OPS units to maximise this technology's potential. The college needed equipment that was powerful, reliable, and capable of handling the daily demands across multiple locations.

Results

The classrooms feel more connected and dynamic, and teaching staff have noticed the difference in how engaged students are. It's made everyday lessons more interactive and enjoyable for everyone involved. The OPS units really bring the Samsung boards to life, and that's been a huge win for Myerscough.

Solution

After hearing positive feedback about VeryPC from industry peers and the excellent service they provide, Edward Trueman, Business Development Manager at Aurora, contacted Channel Partner Manager Gareth Rogers for a quote.

The VeryPC Open Pluggable Specification (OPS) is the industry standard for connecting computer devices to interactive displays through a single universal internal slot. This system eliminates the need for cables, allowing the VeryPC OPS System to simply plug into a dedicated slot at the back of any OPS-compatible display.

The OPS System significantly simplifies the deployment of various large display solutions. Its user-friendly design leads to quicker installation and setup, reducing or even eliminating the need for additional items such as cables and trunking. By using the VeryPC OPS System, organisations can save on both purchasing costs and service expenses.

"The team at VeryPC has been fantastic to work with. From helping us choose the right specs to make sure we had everything set up, their support has been there every step of the way. It's made the whole process so much easier. Myerscough has been thrilled – and so have we!"
